PART V - SUMMARY OF ANALYSIS

A. Describe Critical Values/Resources and Threats:

The BARC map was verified in the field on 7/20/2017. It was determined that there was no moderate burn severity in the burned area as the BARC product indicated. The final burn severity map shows the majority of the fire was low severity with the remaining unburned. Grasses had already resprouted and leaf lengths averaged 3 to 4 inches. The burned area had received a significant rain event prior to site visit and no soil movement was noted though there had been a some ash movement. There are no critical values at risk associated with this fire. The photo below is of the Fragueta Peak area. A PDF of the burn severity map is also attached.

B. Emergency Treatment Objectives: None
